It had to be powerful, agile and utterly distinctive. It had to look, feel and drive like a Jaguar. A true Jaguar sports car; the latest in a distinguished bloodline. We couldn’t just call it F-TYPE; we had to make it F-TYPE.

The F-TYPE is engineered for high performance and instantaneously responsive handling: powerful, supercharged engines and a lightning-fast gearbox; lightweight aluminum body construction and an obsession with balance and proportion; a superb suspension and a host of advanced driving technologies; peerless design and a driver focused cockpit. Together they produce a uniquely connected driving experience, and a sports car that only Jaguar could create - ultra-precise, powerful, sensual and, most of all, alive.
PURE DRIVING PLEASURE

The technical excellence of the F-TYPE delivers a breadth of capabilities to suit the road, the conditions and the demands of the driver.

VEHICLES SHOWN: F-TYPE IN STRATUS GREY
THREE DIFFERENT LIVES

There are three models, each equally at home on the switchback of a mountain pass, on the highway and in the city, while each offering its own distinctive flavor and characteristics.

**F-TYPE** is designed to deliver pure driving pleasure. It combines effortless, exhilarating performance, instant response and precise agile handling, with everyday refinement and usability.

**F-TYPE S** adds greater power and an increased range of sophisticated performance technologies.

**F-TYPE V8 S** offers towering performance and even greater levels of dynamic ability and control.

SUPERCHARGED ENGINES

Power is delivered from a range of three highly advanced engines: a 3.0L V6 with 340 HP, a 3.0L V6 with 380 HP and a 5.0L V8 with 495 HP. Each features a Roots-type twin vortex supercharger mounted in the 'V' of the engine to maintain the powerplants’ compact dimensions.

Jaguar is a leader in the field of Supercharged induction technology. The advantages of supercharging are clear and compelling: it provides a linear delivery of performance and instant access to high levels of torque at all engine speeds, minimizing the gap between the driver's demand for power and the engine’s response.

The F-TYPE Sport Exhaust delivers a crisp note from start up with the promise of performance, building to a race-car inspired crescendo at high rpm and during overrun. An Active Sport Exhaust is standard on the F-TYPE S and F-TYPE V8 S and is also optional on the F-TYPE. The system features active bypass valves which open during performance driving to allow exhaust gases to exit more directly for a deep, dramatic sound. An optional Switchable Active Exhaust allows manual control of the system for even greater driver involvement.
Jaguar’s new generation of supercharged 3.0 liter V6 engines are powerful and refined. Generating extremely high specific power outputs of up to 127 HP per liter, they deliver thrilling performance and a rewarding driving experience. The compact supercharger’s sophisticated boost control and secondary throttle valve ensure that torque curves rise steeply over a broad range of engine speeds. A water-cooled intercooler reduces the temperature of the intake air for greater power and efficiency, while an innovative system of counter-rotating front and rear balancer weights aids smoothness and refinement. They also feature a fast-reacting Intelligent Stop/Start system that can improve fuel economy by up to 5 percent.
The 495 HP 5.0 liter V8 is supremely powerful. A larger supercharger feeds the engine to deliver an astonishing peak torque of 460 lb-ft. from just 2,500 rpm. Acceleration is rapid and progressive, response is immediate and predictable. Advanced technologies deliver performance, refinement and efficiency. The lightweight die-cast aluminum block is supplemented by cross-bolted main bearing caps to increase rigidity. Valves are controlled by dual independent variable cam timing to optimize power at all engine speeds. Spray-guided direct injection delivers precisely measured quantities of fuel directly into the center of the combustion chambers at pressures of up to 2,175 psi for cleaner, more efficient combustion. In common with the V6 engines, it also features an Intelligent Stop/Start system that can improve fuel economy by up to 5 percent.
MODELS

STANDARD FEATURES
QuickShift 8-speed automatic transmission with SportShift selector and steering wheel mounted one touch paddles
Dynamic Stability Control (DSC) with TracDSC mode2
Intelligent Stop/Start system
Electric Parking Brake (EPB) – drive-away release
Deployable rear spoiler
Deployable door handles
Bi-function HID xenon headlamps with washers and LED signature lights
LED tail lamps
Electronically operated convertible roof
Jaguar Smart Key System™ with Keyless start

Reverse Parking Sensors
Dual Zone Climate Control
The F-TYPE QuickShift transmission is both exceptionally fast and superbly refined, offering the benefits of both a double clutch transmission and a conventional automatic without the limitations of either. Eight closely-spaced ratios keep the engine within its most effective rev range for longer, providing instantaneous response and outstanding driver feedback, while also optimizing the engine for both economy and outright performance.

The transmission control system is intelligent and adaptive. It monitors the driving situation together with the demands the driver is making on the car, and responds to provide a truly dynamic experience. Adaptive software automatically modifies the gear shift strategy, ensuring the right gear is selected for every situation. Fast Throttle-Off recognizes when the driver is making rapid throttle adjustments, for example during multiple maneuvers, and automatically holds the gear ratio in anticipation of the next move. Corner Recognition senses when the car is in a corner and holds the ratio ensuring the car is in the correct gear when exiting a bend. When decelerating and changing down, the Speed Matching Management System matches the engine speed to the gearbox speed, and automatically ‘blips’ the throttle during downshifts when in Sport mode, while Spontaneous Vehicle Deceleration enables the F-TYPE to rapidly downshift under very hard braking conditions.

Dynamic Launch Mode, standard on the F-TYPE S, applies maximum torque through the first two gear changes delivering optimum acceleration from rest to 60 mph.¹

The driver can, of course, take full manual control of the transmission using either gear shift paddles mounted behind the steering wheel, or the joystick-style SportShift gear selector. Once in manual mode, the Quickshift system delivers rapid and precisely timed engine torque interventions, creating shorter and crisper gear shifts.
Jaguar has been at the forefront of aluminum car construction for more than a decade and continues to push the boundaries of the technology. The F-TYPE builds on this expertise and uses advanced techniques derived from the aerospace industry, such as epoxy bonding and riveting, to contribute towards the car’s light, strong and rigid body structure.

A lightweight aluminum body structure with high torsional rigidity is the ideal platform for a convertible sports car, and is fundamental to the way the F-TYPE performs, handles and feels. A strong, stiff structure provides an inherently stable platform for precise, agile handling and allows the finely tuned suspension system to deliver connectivity and driver feedback. The body of the F-TYPE is the perfect complement to its high-performance engine range. Together they produce the exceptional power-to-weight and torque-to-weight ratios that deliver the real world measures of performance in a sports car.

All exterior panels are aluminum alloy with the exception of the trunk lid, which is made from composite materials, allowing hidden antennas to receive GPS and radio signals. The exterior panels are constructed from a new AC600 alloy that combines robustness and quality of finish with much greater formability for greater clarity and tightness of radiiuses and feature lines. Jaguar has also developed a new ‘warm forming’ technique for the inner door pressings which works like vacuum forming, using sheet metal rather than plastic. The use of advanced materials and innovative techniques allowed Jaguar’s engineers to reproduce the beautifully crisp, crafted lines of the F-TYPE exactly as the designers had intended, as well as delivering a vehicle with extraordinary structural integrity.
ON BALANCE

It is essential in the design of a great sports car that weight is kept to a minimum, is evenly distributed front to rear and that the center of gravity is kept as low as possible. This configuration in the F-TYPE means that the car has natural balance and is the result of meticulous attention to detail during the design and construction of the body structure. An uncompromising focus on weight distribution achieves the optimum balance between front and rear wheels, with items such as the battery, electronic systems and even the windshield washer fluid reservoir located at the rear of the car.

A shorter car is more agile; a wider car is more stable. The relationship between the length of 176 inches and width of 75.7 inches was precisely engineered to deliver inherent agility and means that the F-TYPE has outstanding driving dynamics. Its low center of gravity reduces body roll in corners, while short front and rear overhangs mean that the mass is concentrated within the wheelbase. These essential factors combine to ensure that the F-TYPE is naturally agile.

MOMENT OF MASS INERTIA

The closer the weight is to the center of the car, the easier it is to turn the car.

\[ I = \sum_{i=1}^{N} m_i r_i^2 \]
The F-TYPE first took to the road in the virtual world of Jaguar’s Computer Aided Engineering (CAE) systems ensuring that all components underwent extensive development and testing before being committed to the physical testing process. Engineers produced a series of virtual prototypes to realistically simulate the behavior of complex mechanical systems allowing them to analyze multiple variations until the optimal design was achieved. For example, using a technique first used in the aerospace industry, aerodynamic testing took place in a virtual wind tunnel with Computational Fluid Dynamics running on high speed supercomputers. During its virtual life, the F-TYPE completed half a million tests, requiring 10 million computer processor hours and creating 300TB of data. The CAE development process was one of the key contributing factors in delivering the exhilarating performance and responsiveness of the F-TYPE.
The real world testing to prove the car and fine tune the set-up took place in specialist facilities and the harshest environments across the globe in temperatures ranging from -40°F to 122°F, and at altitudes of up to 13,123ft. High-speed stability tests, for example, were conducted at the Nardo Ring in southern Italy. The Nordschleife circuit at the Nürburgring in Germany was the perfect location to prove out handling, braking, cooling and durability. Known as the “Green Hell”, and featuring 12.93 miles of track with 73 turns, it is renowned as the most demanding circuit in the world and the ultimate test of both car and driver.
BROUGHT TO LIFE

The essential ingredients in place, the F-TYPE is ready to take on the world’s most thrilling roads. You’ll discover an intuitive and instinctive driving experience like no other. An experience that surpasses high performance and pin sharp handling to deliver pure entertainment. The most awe-inspiring and exhilarating twists and turns on the road belong to the F-TYPE.
ACTIVE AERODYNAMICS

60MPH initiates auto deploy | reduces lift by up to 264lbs | 40MPH initiates auto retract

Aerodynamic performance is the essence of the F-TYPE design and is seamlessly integrated into the body for low levels of lift and excellent stability at high speed. A front splitter beneath the grille and a rear venturi manage airflow along the vehicle’s underside with the sharply defined tail helping air to separate cleanly at lower speeds. A deployable rear spoiler rises at speeds in excess of 60mph to reduce lift by up to 264lbs. Even the door handles retract when not required, with their flush design creating uninterrupted air flow along the flanks.
The F-TYPE’s quick, responsive steering is designed to provide the most direct connection between the driver’s hands on the wheel and the contact point of the tires on the road. The car’s quick steering rack delivers a precise reaction to driver input. The feeling of connection is also maximized by the use of aluminum alloy for the front subframe. This not only helps to reduce weight, but, in conjunction with the F-TYPE’s forged alloy suspension, also creates an immensely strong structure for the most precise feedback and control.

VEHICLES SHOWN: F-TYPE V8 S IN SALSA RED
PERFORMANCE BRAKING SYSTEMS

Three braking systems are available, each engineered to deliver confident, progressive feel and sustained, consistent high performance. The front calipers make extensive use of aluminum to reduce the unsprung mass of the car, benefiting both handling and ride refinement. Each system features large, ventilated brake discs – up to 380mm (15 inches) in diameter on the High Performance and Super Performance systems. This large swept area improves braking force as well as providing greater capacity for the discs to absorb and dissipate the heat energy generated during braking.

Brake cooling is also enhanced with additional suspension scoops and ducts developed with the assistance of advanced Computational Fluid Dynamics systems. This channels cooling air directly to the brakes, reducing fade, and helping sustain their performance during extended periods of dynamic driving.

*Jaguar Super Performance brakes with Red brake calipers are available as part of the Performance Pack on F-TYPE S and F-TYPE V8 S models
VEHICLES SHOWN: F-TYPE V8 S IN SALSA RED
CHASSIS AND SUSPENSION

The aluminum body of the F-TYPE creates an immensely stable platform from which the all-round forged aluminum double wishbone suspension can control the car. With the damping set-up optimized for the best partnership between dynamics and refinement, it gives the perfect combination of control, agility and feedback.

On the F-TYPE S and F-TYPE V8 S models, Adaptive Damping assesses body motion and pitch rates 100 times per second, and adjusts the settings for each damper accordingly. The system improves control, handling and agility as well as the ability to rapidly detect and react to critical driving conditions and driver demands. It achieves this with a series of sensors that are placed around the car to monitor the body's vertical movement, pitch and roll rates. The steering wheel position is measured 500 times per second enabling the system to predict the body's roll rate. The stiffness of each individual damper is then adjusted to help maintain body control, stability and agility.
DIFFERENTIALS

The mechanical Limited Slip Differential featured in the F-TYPE S was chosen because of its innate suitability for the rear-wheel drive sports car experience. It offers the perfect opportunity to leverage the car’s superb handling and the upper limits of its grip. The Limited Slip Differential improves traction and agility during acceleration out of corners and on slippery surfaces. The car can also make better use of the available traction before the DSC system needs to intervene and results in more refined stability control during dynamic driving.

An Electronic Active Differential provides the F-TYPE V8 S with the ultimate in agility and control. Working in conjunction with the stability, traction and ABS systems, the Electronic Active Differential uses an electric motor acting on a multi-plate clutch to manage the delivery of torque to each of the rear wheels. Full electronic control of the rear differential lock enables the system to apply full locking torque almost instantaneously. The Electronic Active Differential allows for very fine control of the power delivery to limit wheelspin, maximize traction and offers even greater levels of control.
ADVANCED CONTROL

The sophisticated transmission control system instinctively modifies the car’s response to road conditions and driver input, enhancing the driving experience. It analyzes how the car is being driven by measuring acceleration and braking, cornering, as well as road load and kick down activation. It then uses sophisticated adaptive software to ensure that the most appropriate gear shift strategy is automatically selected. For even more responsive performance, the selection of Sport Mode alters the gear shift program to deliver shorter shifts and hold ratios at higher revs for longer.

UPSHIFTS INHIBITED BY FAST THROTTLE OFF

SPONTANEOUS VEHICLE DECELERATION RAPIDLY DOWNSHIFTS UNDER HEAVY BRAKING. FRONT DAMPERS STIFFEN TO HELP KEEP BODY LEVEL

CORNER RECOGNITION HOLDS THE GEAR THROUGH THE BEND TO MAINTAIN STABILITY. OUTBOARD DAMPERS STIFFEN TO REDUCE BODY ROLL

GEAR SHIFT STRATEGY ADAPTS TO DELIVER INSTANT ACCELERATION. REAR DAMPERS STIFFEN TO HELP KEEP CAR LEVEL
Dynamic Mode remaps the car’s software to further emphasize its sporting character. It sharpens the throttle response, increases steering weighting and performs gear shifts more quickly and at higher engine speeds. Selecting Dynamic Mode also prevents automatic upshifts when the gearbox is used in manual mode. Dynamic Mode is standard on the F-TYPE S and F-TYPE V8 S.

On the F-TYPE S and F-TYPE V8 S models, the Configurable Dynamics part of the Performance Pack allows the driver to define which characteristics are altered when Dynamic Mode is selected. This option also features the Dynamic-i display system, which can show performance indices such as G-Force meter and lap time, plus throttle, steering and brake inputs on the 8-inch Touch-screen.
FOR MORE DEMANDING CONDITIONS, THE DRIVER CAN SELECT DYNAMIC MODE OR RAIN/ICE/SNOW MODE
Sophisticated driver assistance systems are available as part of the optional Vision Pack to provide reassurance, information and control, and allow the driver to focus on the pleasure of the drive. These include Blind Spot Monitoring, which is designed to help alert the driver to the presence of a vehicle in an adjacent lane. Reverse Traffic Detection can provide warnings of other vehicles in the reversing path of the F-TYPE, for example when backing out of a parking space. Front and Rear Parking Aids and a Reverse Park Camera also provide valuable assistance during parking maneuvers.

Standard Bi-function HID xenon headlamps provide an intense white light for both high and low beam in a single unit. The optional Adaptive Front Lighting system measures the speed of the car and angle of the steering wheel, swivelling the lamps by up to 14 degrees out, and up to 7 degrees in, for improved visibility during cornering. The optional Intelligent High Beam system automatically switches between low and high beam when necessary, using a sensor mounted at the front of the rear view mirror. The rear lamps feature LED technology with light guides that not only create a distinctive design, but also have the ability to illuminate to full brightness more quickly than conventional bulbs, potentially giving a following driver more time to react.

Every F-TYPE also features a complement of advanced active and passive safety systems, including Emergency Brake Assist (EBA), Electronic Brake-Force Distribution (EBD), driver and passenger front airbags, seat mounted side airbags with head protection, seat belt pre-tensioners and roll over protection bars.
The F-TYPE immediately connects with the driver, so that he or she becomes almost an extension of the car. Its 1+1 configuration is designed to wrap around the driver. The cockpit's design provides visibility, minimal distractions and close-to-the-center-of-gravity seating with rigid seat frames and structure. The dash has been intentionally kept as low as possible and free from clutter to increase the forward view. The Intelligent Venting System, part of the advanced climate control system, hides the twin central air vents which automatically deploy when required, rising from the dashboard and retracting after use. Two seat styles are available, the standard Sport Seat, and an optional Performance Seat, offering enhanced lateral support during rapid cornering and upholstered in Premium leather. For an even more luxurious finish, all models can also be specified with the optional Extended Leather Pack, which adds leather to the upper dash, center console, door casings, windshield pillars, sunvisors and header rail. The Extended Leather Pack also makes available additional striking interior combinations, including contrast stitching and duo-tone interiors.
DRIVER ORIENTATED CONTROLS

The F-TYPE presents information to the driver only as necessary or when requested. Instruments are simple, clear and easy to read featuring two large analog dials – essential in a sports car. The three spoke design of the steering wheel incorporates key functions, with gearshift paddles mounted behind the spokes for manual control without the need for the driver’s hands to be taken from the wheel.

The Jaguar SportShift Selector is simple and intuitive to use, inviting greater driver involvement: it offers full Auto mode plus, in Sport Mode, manual operation. This allows the driver to select gears sequentially by tipping the lever forward to shift down a ratio and shift up a gear by pulling the lever back.

Dual Mode Rotary Switches are used as part of the controls for the advanced climate control system. Right and left dials control cockpit temperature on the respective sides of the car when dual zone climate control is specified. When pressed, the dials change mode to control the optional seat heating functions, with the screen at the center of the dial changing to display the corresponding use.

The F-TYPE’s 8-inch color Touch-screen provides simple control of a number of the car’s features, including Navigation, infotainment and, when fitted with the Performance Pack, the F-TYPE’s Dynamic-i display system.3
THE FEELING INSIDE
The F-TYPE interior conveys a combination of functional ergonomics with sporting style through its meticulously considered cockpit architecture, its simple controls and its clear instrumentation. It is designed to put the driver first and to be an opportunity for individual expression. Everything offers a rewarding, highly tactile experience with extensive ranges of fine leathers, colors and materials making it more personal. Push the Start button and the car comes alive with a cascade of light from the switchgear. 

**Configurable Lighting**, standard on the **F-TYPE S** and **F-TYPE V8 S**, adds even greater personalization with choices of Phosphor Blue, Pale Blue, White, Coral or Red to suit the driver’s mood. Activate Dynamic Mode and the lighting switches to Red on the door grab handles, center console and instrument cluster.
IN-CAR ENTERTAINMENT

MERIDIAN™ SOUND SYSTEM 380W  |  MERIDIAN™ SURROUND SOUND SYSTEM 770W

Two superb audio systems bring the cockpit to life with incredible, rich sound.

Two high specification systems were designed in conjunction with British audio experts Meridian™ specifically for the F-TYPE. They feature advanced technology such as Digital Signal Processor (DSP) software to optimize every element of the system and use Meridian™ Cabin Correction’s advanced algorithm to redefine the operating parameters and ensure that the audio experience is superbly consistent - roof up and roof down.

The standard Meridian™ Sound System offers superb audio reproduction through 10 speakers – including 2 sub woofers, 380W and 12 channels. The ultimate Meridian™ Surround Sound System features 12 speakers and 770W. This advanced system uses Meridian Trifield™ technology to ensure a perfect sound for both driver and passenger.

EVEN THE ROOF IS FAST

The F-TYPE fabric roof offers both light weight and refinement with the outer canopy acoustically enhanced with composite fabric and flush fitting heated rear window glass. The roof can be raised or lowered in just 12 seconds and operated fully automatically at speeds of up to 30 mph. Its neat, compact size when folded keeps the rear of the car low and sleek and avoids the need for a tonneau cover – another weight saving. An optional removable wind deflector can also be fitted between the roll over protection bars.
CONVERTIBLE TOP COLORS
Jet Grey Red Beige
SEATS

Two seat styles are available in all models, each offering superb comfort and support. On the F-TYPE and F-TYPE S, the Sport Seat with leather and Suedecloth facings and 6-way power and manual adjustment is standard. The F-TYPE V8 S models gain the added luxury of full leather facings and 14-way fully-electric adjustment with memory. All models can also be specified with the optional Performance Seat, which offers enhanced lateral support during rapid cornering, and is upholstered in Premium Leather; it is available as an option on the F-TYPE and is part of the Performance Pack on the F-TYPE S and F-TYPE V8 S. Both Sport and Performance Seats can also be specified with a heated function as part of the Premium or Climate Packs. When combined with the Extended Leather Pack, the Performance Seat can be trimmed in duo-tone leather or contrast stitching. For the finishing touch, it is also possible to choose from Jet, Red or Camel seatbelts.

Now you’re ready to choose just the right interior color combination from Jaguar’s exclusive collection.

ADDED ATTITUDE, ADDED OPTIONS

DESIGN PACK AND BLACK PACK*

The F-TYPE's strong visual assertiveness can be further enhanced thanks to the availability of two exciting options - Design Pack and Black Pack. The Design Pack features body colored sill extensions, front aerodynamic splitters and a Gloss Black rear valance and, on F-TYPE and F-TYPE S models only, a color-keyed rear venturi. The Black Pack features a Gloss Black finish on the front grille and surround, as well as to the bumper beam, hood louvers and front splitter. The Gloss Black finish also extends to the front outer meshes, side power vents, rear valance and the roll over protection bars.2

IMPORTANT NOTICE

Jaguar Land Rover Limited is constantly seeking ways to improve the specification, design and production of its vehicles and alterations take place continually. While every effort is made to produce up-to-date literature, this brochure should not be regarded as an infallible guide to current specification, nor does it constitute an offer for the sale of any particular vehicle. Distributors and dealers are not agents of Jaguar Land Rover Limited by any express or implied undertaking or representation.

ENVIRONMENTAL INNOVATION AT JAGUAR

Jaguar is proud to continue the company’s tradition with its approach to Environmental Innovation. From the choice of lightweight materials and lean production methods to the efficiency of its engines and designs, Jaguar is committed to operating as a more sustainable business and reducing its overall environmental impact.

Jaguar’s flagship XJ model was the first in the company to achieve ISO 14040, the international standard for vehicle ‘whole life cycle’ assessment. This certification measures the environmental impact of XJ from component material sourcing and manufacturing process, through its driven life time, to final disposal. But that’s not all. Every new Jaguar vehicle is designed to be 85% recyclable and reusable, in addition 95% recoverable and reusable with 10% potentially for energy generation.

The XJ, F-TYPE and XK’s innovative use of lightweight aluminum, which incorporates up to 50% recycled material from the manufacturing process in the body structure, provides considerable performance benefits. This includes improved fuel consumption, and less CO₂ emissions as well as the dynamic performance inherent in its weight saving design.

Jaguar is committed to reducing dependency on fossil fuels, using fewer resources and creating less waste. Already the manufacturing assembly CO₂ emissions of each Jaguar built in the UK since 2009 is offset. For every ton of CO₂ emitted in the assembly process, Jaguar invests in carbon reduction projects that reduce an equivalent ton of CO₂ elsewhere.

Offsetting allows Jaguar to take action now, to reduce its impact on the environment, as part of an integrated carbon management plan. The company plan includes targets to reduce operating CO₂ emissions and waste to landfill by 25% by March 2015 and European fleet average tailpipe CO₂ emissions by 25% by 2015. All targets are based on 2007 levels.

But it doesn’t stop there. We have been awarded Platinum status in the Corporate Responsibility Index 2012 from the UK’s Business in the Community, in recognition of our 360 degree approach to sustainable development.

That’s Environmental Innovation at Jaguar.
